

## **Phoenix Controls Corporation Announces Pandemic-ready HVAC Applications and Information Sources**

**ACTON, Mass. – April 28, 2009 – Phoenix Controls**, a Honeywell International business, announces the availability of HVAC solutions and information sources that can help community hospitals prepare for the likelihood of a human pandemic incident.

The airflow control valve product family, known as Theris<sup>®</sup>, is designed specifically for the control of airborne viruses. Theris valves and controllers ensure that the direction of airflow in hospitals goes from clean to unclean areas while venting dangerous pathogens out of the building.

Theris controllers have pandemic control sequences built-in as a core function. This enables the airflow in normal patient rooms to be converted on-demand to pandemic isolation rooms. Using pandemic mode of operation, hospitals are then better prepared to handle a sudden surge of patients that present symptoms suspected to be pandemic influenza.

Additional information on Pandemic Response can be found at <http://www.phoenixcontrols.com/solutions-healthcare-spaces-pandemic-response.htm>. For further inquiries, please contact Mike Soper at [msoper@phoenixcontrols.com](mailto:msoper@phoenixcontrols.com) or by calling (978) 795-3487.

Phoenix Controls Corporation is a worldwide developer of precision airflow control systems for critical room environments, such as laboratories, hospitals, vivariums, and pharmaceutical clean rooms. The company is a wholly owned subsidiary of Honeywell International and is registered to ISO 9001:2000. Celeris, Traccel, and Theris are trademarks of Phoenix Controls Corporation
