The Advanced Pressure Monitor II (APM2) is a flexible, touch-screen local display unit that measures pressure, temperature, and humidity for pressurized spaces for the purpose of ensuring integrity of ventilation and airflow. The APM2 is more than a pressure monitor. Flexible use of analog inputs allows temperature and humidity sensors to be configured for these additional values to be displayed for the user. A digital output can also be used for local occupancy control of an airflow control valve or other two-state device.

The APM2 provides a bright, easy-to-read display that combines a free-form message banner on the left one-third of the screen, together with dynamic room operating parameters on the right two-thirds of the screen. The touch-screen display makes the APM2 easy to operate by just pressing areas of the screen to perform functions. Nuisance alarms are virtually eliminated because of the high accuracy and reliability of the APM2, and through the use of seven types of alarm functions. If desired, the APM2 can be configured so it never needs to be touched by staff on the floor.

FREE-FORM MESSAGE BANNER

Having only the value of a pressure reading on a display is not always meaningful to untrained staff. To address this, the left one-third of the screen is dedicated to a free-form message banner that is intended to provide notice to personnel outside the room what is happening inside the room. The conditions are red for "stop", yellow for "caution", and green or blue for "go". Text above and below the color icon can be customized by the user, and made full screen if desired. Each of the four colors can be assigned functions: room occupied, room unoccupied, APM2 is active, APM2 is in standby, or no action.

The right two-thirds of the screen shows the room label, intended pressure (positive, negative, neutral), operation (normal, alarm, door, valve), the pressure value (WC or Pa) and a slide-bar that indicates where the current pressure reading is relative to alarm setpoints.

ACCURACY

Using pressure transducer technology, the APM2 is capable of sensing at a 0.5% (±0.25%) full scale accuracy and with a display resolution up to 0.0001" WC. It can meet the stringent requirements of pressure sensing for laboratory animal facilities, critical healthcare spaces, biocontainment cleanrooms and any application where very low room pressure sensing is required.

**PRODUCT FAMILY**

APM2 = Advanced Pressure Monitor II

**PRODUCT OPTION**

AC = Accessory

**TYPE**

ANC = Remote annunciator sounds an audible alarm; remote unit is located away from the wall-mounted unit housed in a single-gang stainless steel wall plate; includes a remote alarm speaker and remote acknowledge button to temporarily silence the alarm.

PPP = Pressure Pickup Port, an additional single-gang stainless steel plate used to sense room pressure - two PPPs are included standard with the APM2.

For all of the following transducers:

Remote pressure transducers can be used with the APM2 to measure differential pressure in a secondary space. The 264 and 267 transducers sense differential pressure and convert this pressure difference to a proportional electrical output signal - either 0-5 Vdc or 0-10 Vdc, respectively. Using 0-10 Vdc (267 model) provides a higher resolution output signal than 0-5 Vdc (264 model). Standard accuracy is usually adequate for most critical room applications. Use high accuracy if building specifications require it.
